

Homework

Portugal is Burning

Download data from [UCI](#) about Portugal forest fires. Predict burnt area using deep neural network built upon keras. Try build model using `Sequential API` and rewrite it using `Functional API`. Note: Prepare data correctly, i.e. read recommendations in dataset description and think about what transformations would be helpful for the features.

Deep Weeds

Using `tensorflow_datasets` load images of [weeds](#). Build Convolutional Neural Network to predict their species. Try different parameters and additional [layers](#) to perform as best as you can!

Good luck, don't hesitate to ask for help if needed!
